WORK EXPERIENCE

Senior Software Developer Bosch security Systems

08/2022 - 01/2025

Achievements/Tasks

- Software development using Python and C, enhancing security camera functionalities and system performance. My responsibilities included designing state management systems, implementing asynchronous event handling, and developing drivers for sensor communication, contributing to the overall reliability and efficiency of the systems.

Senior Software Developer Nonius Software

11/2017 - 08/2022

Porto, Portugal

Achievements/Tasks

- EISA (DRF)- A comprehensive integration tool where we integrate several resources from different ERPs into our local ERP to data consolidation. I've participated in the design and architecture used in this project. I'm responsible for all development and new resource integration.
- Nonius Expenses (DRF / Angular) - A tool responsible for all expenses and benefits from Nonius to its employees. It's an easy-to-use web platform where any employee can submit and justify an expense. I've been responsible for designing the architecture, all development, and maintenance of this tool.
- Nonius Order management (Django) - A comprehensive ERP to handle all orders, invoices, payments and projects at the company, I've participated in the architecture specifications. I've been responsible for all development and maintenance of both Django backend and frontend, as well as all database SQL queries to external ERPs.

Senior software developer Dealer Marketing

11/2015 - 11/2017

Dublin, Ireland

Tasks/Achievements

- Design and Development of a highly interactive contact center solution. We are now proud to click and dial our customers from a screen and bring all reports needed with one click where before were days of unproductive spreadsheets.
- Design and Development of a CRM solution that brings together a powerful tool and an amazing user experience. Now we can gather all information in one application, where we can truly analyze and mine the data, transforming lots of useless data into a powerful marketing/sales solution to our clients.

Software developer Intelbras

11/2012 - 11/2014

SC, Brazil

Tasks/Achievements

- Firmware development to managed switches and routers.
- Development of a management system "Python + Django + HTML5/CSS3" for control all access point into the network.
- Analyze technical and commercial feasibility to new products.

SKILLS & COMPETENCES

Python

TypeScript

REST APIs

PERSONAL PROJECTS

Workedin

- A social project to help needed people to find jobs in a really easy way. The main project was a web platform integrated with google maps, this helped them to find jobs close to their homes, that was the main issue.

Marketips

- Web platform to analyze in an easy way data from imported products to Brazil. The tool is able to generate charts and tables where the market share from a product or market segment can be analyzed. The information generated is really important for companies to follow their position in the Brazilian market.
